Cases and Issues

Case studies of programs in 6 nations

GLOBAL and EVIDENCE-BASED

- A global trend toward availability of digital personalized learning.
- Ongoing research on digital K-12 education, much more needed.

MOBILE and OPEN

- Rapid increase in mobile tech access in developing nations “leapfrogs” older technologies
- Open educational resources (OERs) & LMS a disruptive trend

BLENDED and FACILITATED

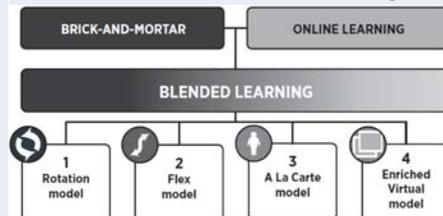

- Outside USA, fully online a rarity, blended becoming more common.
- Teachers have vital role as active facilitators of digital learning.

PERSONALIZED and ADAPTIVE

- Many models presented for personalizing learning.
- Data-driven adaptive learning drives many blended schools.

- In developing nation **Nepal**, tech may bypass school access barriers for girls (**Cavanaugh, Ch 13**)
- For OERs and Open LMS, quality, standards, accessibility, total cost must be addressed (**Darrow, Ch 4**)

Findings

- 54-nation iNACOL survey in 2011 found widespread digital tech use in schools (**Clark & Barbour, Ch 1**)
 - Digital ed researchers need to ask right questions; answer critics, appreciate complexity (**Ferdig, Cavanaugh, & Freidhoff, Ch 5**)
- Developing vs developed world mobile subscriptions, 2005-2014**

- Blended learning in **Australia** less disruptive (hybrid; more disruptive models in **USA**) (**Harris, Ch 14**)
- Online teaching standards & research gaining traction in U. S. (**Kennedy & Archambault, Ch 2**)
- High-touch personalized learning in **Canadian** school; (**Smallwood, Reaburn & Baker, Ch 12**)
- Adaptive is a trend worthy of separate consideration.

Conclusions

- **What can digital learning programs in the U. S. and other nations learn from each other?**
 - Best practices of effective programs with **high-quality teaching, learning & outcomes** should be widely shared.
 - To increase digital learning, **education transformation efforts** must address policy and access barriers worldwide.

- **Blended learning** is likely to continue to grow, while fully online schools see little growth.
- **Continuing PD & support** is needed to increase teacher adoption of digital tech tools.
- Digital personalized learning will continue to grow globally, with a primary focus on **blended learning models** relevant in the local context.
